

AGENT WHITE – *picloram or “Tordon”*

*“eye
irritant +
wear eye
protection”*

Developed by DOW CHEMICAL in 1964 for use in chemical vegetation warfare in Vietnam. When mixed with 2,4-D, it was called “Agent White.” Picloram does not adhere to soil, and therefore is now a widely-found contaminant of groundwater. Smells like chlorine. Above 500 ppb (EPA), may cause liver damage. A persistent herbicide for the control of broad-leaved weeds on non-crop and utility areas. Picloram is contaminated with the carcinogen hexachlorobenzene. [source: de.wiki, EPA, & NCAP]
